

## CMPE 261 - Large Scale Programming Worksheet Section B

In this week you will implement simple client-server applications with XMLRPC library

### Part I

- Download the XMLRPC examples from the moodle and execute them.
- Execute the Sever and Client applications on different computers.
- Send different messages from server to client.

### Part II

Implement a XMLRPCServer that calculates power of a number and sends the results to a XMLRPC client.

Test your program with different numbers.

### Part III

In this part you are asked to implement an XMLRPC Client that works with commandline parameters: For example:

```
java XMLRPCClient http://localhost:9000 bilgi 3
```

Then your program should output : 9

Show all of your work to your assistant.
